SKILLS

ENGINE & CODE

UES · Unreal C++ · Blueprints · Unity · C# · Git

TECHNICAL ART

Custom & Cell Shaders · GPU Foliage · Runtime Virtual Textures · Stylised Rendering

3D PIPELINE

ZBrush · Maya · Blender · Substance Painter · Houdini · Rigging · Control Rigs

SYSTEMS & DESIGN

Online Multiplayer (EOS) · PS5 Console Port · Level Design · Sequencer · Metahuman · MoCap

QA & OTHER

Bug Tracking · Regression Testing · Clip Studio Paint

EDUCATION

Technical Art — Certificate of Completion

ELVTR · Instructor-led course

2026 · Awarded for exceptional performance

Bachelor of Game Design

Academy of Interactive Technology · Sydney

2023 – 2025

Pre-Medicine (discontinued)

University of Wollongong

2022

01 ABOUT

I build games end-to-end — from engine architecture to GPU shaders, from multiplayer replication to full 3D character pipelines. Currently finishing a Bachelor of Game Design at AIT Sydney, with 6 months of industry QA at Sweaty Chair and a portfolio of solo UE5 projects. I'm a self-driven generalist who goes deep on every layer of the stack, and I'd always rather solve a hard problem in a new way than copy a safe one.

02 EXPERIENCE

ELVTR — Technical Art

2026

Instructor-led course (Gavyn Thompson) · Certificate · github.com/AndreHanna04/Unreal-Engine-Python-File-Validator

PYTHON UES EDITOR SCRIPTING TOOLS PIPELINE

- Completed the course with a Certificate of Completion awarded for exceptional performance across all coursework and assignments.
- Built an Unreal Engine Python file validator — a rule-based framework checking extensions, file size, actor tick tags, and material settings, with config-driven allowlists and structured JSON reports.
- Runs in-editor and from the command line, filterable by rule type, severity, or name so it slots into a review or CI step.

Sweaty Chair

NOV 2024 – MAR 2025

QA Intern · Sydney, Australia

UNITY C# BUG TRACKING REGRESSION TESTING

- Executed structured test plans in a live production pipeline, documenting reproducible bugs using internal tracking tools.
- Performed regression testing across multiple release cycles to maintain build stability.
- Worked directly with developers and producers to uphold production quality and a strong culture of polish.

Foot Locker

MAR 2022 – PRESENT

Sales Associate · Sydney, Australia

- Coordinated team workflows in a high-traffic retail environment — built communication, leadership, and customer service skills.

03 PROJECTS

Whistle — Open-World Platformer

IN DEVELOPMENT

6 months · Solo game-side developer

UES C++ TECHNICAL ART LEVEL DESIGN

- Sole programmer, designer, and technical artist on a team project — owned all game-side development independently.
- Built a GPU-based foliage tracking system in C++ driving real-time reactive environmental storytelling.
- Engineered a Universal Occlusion Mask via custom material node graph, dynamically keeping the player visible through any geometry.
- Designed a modular input buffer with Enhanced Input, coyote time, grind rail, and custom player movement.

Zero-Gravity Multiplayer Shooter

SHIPPED

1 trimester · Solo

UES C++ EPIC ONLINE SERVICES NETWORKING

- Designed and built a networked zero-gravity chaos shooter using EOS for session management and gameplay replication.
- Diagnosed and resolved desync bugs through systematic reproduction, logging, and iteration.

Stylised Landscape — Environmental Design

SHIPPED

1 trimester · Solo

UE5

HOUDINI

BLENDER

TECHNICAL ART

- Built a GPU-optimised grass pipeline (Houdini → Blender → UE5) with hand-tuned LOD transitions for performance.
- Implemented Runtime Virtual Textures for dynamic world-colour blending; designed a reversed-gravity concept environment.

3D Character — Layton

SHIPPED

1 trimester · Solo · Full DCC pipeline

ZBRUSH

MAYA

SUBSTANCE PAINTER

UE5

- End-to-end pipeline: concept → ZBrush high-poly sculpt → Maya retopology → Substance PBR texturing → UE5 render.
- Built a custom cell shader and control rig for stylised in-engine character animation.

Junkyard Drifter — Ubisoft AU/NZ Game Jam 2024

SHIPPED

2 weeks · Solo · andopie.itch.io/junkworld-drifter

UE5

GAME JAM

SOLO

- Designed, built, and shipped a solo skating game in 2 weeks for the Ubisoft AU/NZ 2024 Game Jam.
- Delivered a complete, polished experience through rigorous scope control and playtesting-driven iteration.

Hack-and-Slash — PS5 Console Port

SHIPPED

Solo

UE5

PLAYSTATION 5

CONSOLE SDK

- Ported a hack-and-slash game to PS5 — platform-specific input handling, SDK requirements, and certification workflows.
